Subject: Disposal of 9-55g water barrels from Penn Plaza

Wayne/Pat – there are nine 55g drums of water that contain low levels of petroleum that have been stored at the Penn Plaza yard since 2008. Dave Dinkuhn (Parametrix) is aware of the location of the barrels. EPA is the lead on disposal, and have indicated that based on their review of the chemistry they don't have any concerns with how we dispose – I suggested disposal in an adjacent SS MH, and Kathy Parker with the EPA indicated that sounded like a good idea. Can one of you coordinate with Dave Dinkuhn and perform the disposal? Dave and I met with Trip McConkey last month on-site, and Trip offered use of his forklift to move the barrels. An FYI that there are 22 other barrels at the site full of soil that Dave is coordinating with Waste Management to dispose of separately.

Kathy indicated the EPA needs to be notified when we do the disposal so they can keep track of our access to the site.
